PROFESSIONAL SUMMARY

Java Software Engineer with **7+ years of experience** in backend development, enterprise applications, and production support. Skilled in **Java, Spring Boot, Microservices, REST APIs, SQL, PostgreSQL, Elasticsearch, and AWS**, with experience in application development, API integration, debugging, performance troubleshooting, and root cause analysis. Experienced in **mentoring junior developers, conducting code reviews, resolving security vulnerabilities, and improving application reliability**. Recently developed full-stack and AI-powered applications using **Java 21, Spring Boot 4, React.js, and PostgreSQL**.

TECHNICAL SKILLS

Programming & Backend: Java, Spring Boot, Microservices, REST APIs
Frontend: React.js, JavaScript, HTML, CSS
Databases & Messaging: PostgreSQL, Elasticsearch, Kafka
Cloud & DevOps: AWS, Docker, Gradle, Jenkins, CloudBees, Git, GitHub
Testing & API Tools: JUnit, Mockito, Postman
Monitoring & Security: Datadog, Splunk, Coralogix, Snyk
Development & Support: Debugging, Root Cause Analysis (RCA), Production Support, Troubleshooting
Other Tools: Jira, ServiceNow, LaunchDarkly, GitHub Copilot, Claude, Gemini

PROFESSIONAL EXPERIENCE

Staff Software Engineer Jan 2025 – May 2026
Cloud1 Software India Private Limited | Bangalore, India *Remote*

- Developed and maintained **Java-based enterprise applications**, supporting backend services, REST API integrations, and production functionality.
- Investigated and resolved **50+ customer-reported issues** by reproducing defects, analyzing application logs, debugging code, and identifying root causes.
- Improved **application reliability** by identifying recurring production issues and implementing corrective fixes and automated recovery workflows.
- Mentored junior developers and conducted **pull request reviews**, providing technical guidance and maintaining code quality and development standards.
- Collaborated with cross-functional engineering teams to troubleshoot complex application issues, resolve defects, and support production stability.

Senior Software Engineer Feb 2024 – Dec 2024
Cloud1 Software India Private Limited | Bangalore, India *Remote*

- Developed and maintained **Java-based asset management features**, including static and dynamic tagging, tag rules, asset filtering, and exclusion workflows.
- Implemented application functionality supporting the management and processing of **10,000+ assets** across enterprise environments.
- Investigated **Elasticsearch performance bottlenecks** causing delayed and failed asset-tagging operations through log analysis, debugging, and root cause investigation.
- Developed **scheduled recovery and reprocessing jobs** to restore failed tagging operations, reduce manual intervention, and improve processing reliability.

Senior Software Engineer Jan 2021 – Jan 2024
Delixus Software India Private Limited | Bangalore, India *Remote*

- Developed and maintained **Java-based enterprise application features** supporting security findings, asset visibility, and security analysis workflows.
- Implemented backend enhancements and resolved application defects through code analysis, debugging, and testing.
- Identified and remediated **30+ security vulnerabilities** reported through Snyk, including dependency-related issues, improving application security and code quality.

Software Engineer Sep 2018 – Dec 2020
Delixus Software India Private Limited | Bangalore, India *On-site*

- Contributed to the development of a **Java-based data analysis platform** supporting enterprise application analysis and cloud migration workflows.
- Developed and maintained **AWS integration functionality**, connecting enterprise applications with cloud services through AWS connectors.
- Supported **container-to-cloud migration workflows** by implementing application features and troubleshooting integration issues.
- Investigated application defects through log analysis, debugging, and testing to support reliable application functionality.

PROJECTS

Support Triage Systems (Rule-Based & AI-Powered) | Personal Projects *Oct–Nov 2026*
Technologies: Java 21, Spring Boot 4, Spring Framework 7, React.js, REST APIs, PostgreSQL, Google Gemini AI, Neon, Render, JUnit, Mockito, Vitest, React Testing Library, Git, GitHub

- Designed, developed, and deployed two independent full-stack support ticket management applications using Java, Spring Boot, React, and PostgreSQL.
- Built REST APIs for ticket CRUD operations and interactive React dashboards with search, filtering, ticket statistics, and status management.
- Implemented rule-based incident classification and integrated Google Gemini AI for automated category and priority recommendations, technical summaries, and troubleshooting guidance, with rule-based fallback.
- Integrated separate Neon PostgreSQL databases and deployed both applications on Render; implemented **50 automated tests (32 AI-powered, 18 rule-based)** across backend and frontend components.

AI-Powered Version: Live Demo | GitHub
Rule-Based Version: Live Demo | GitHub

EDUCATION

Centre for Development of Advanced Computing (C-DAC) Feb 2018 – Aug 2018
PG Diploma in Advanced Computing (PG-DAC) *Bangalore, India*

University of Calicut Aug 2013 – Aug 2017
Bachelor of Technology (B.Tech), Computer Engineering *Kerala, India*

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

Amazon Q Developer for Java Course — *SIMPLILEARN* Oct 2026
3-Hour Claude AI Mastery Workshop — *EDAPT* Sep 2026
AI Tools and Claude Workshop — *BE10X* Sep 2026
